

Accepted for Treatment

Letter from Beike Biotech Int. Department

To whom it may concern:

This letter certifies that **Dumitru Tudorache** has been accepted for stem cell treatment at Shenzhen Beike Biotechnology Co., Ltd associated hospitals. After a thorough review of **Dumitru Tudorache**'s medical information, our physicians have confirmed a primary diagnosis of **Optic Nerve Atrophy and Retinopathy Pigmentary** is treatable. We have treated many patients with this disease, and based on our experience your possible treatment outcomes are : **improved vision; improved light sensitivity; improved night vision, and slowed down further regression in vision.** These improvements are due to the ability of the stem cells to differentiate into neural cells, reduce inflammation and scar tissue, release growth factors, promote cellular differentiation and reduce apoptosis which help in repairing the injured area and nerves. Please work with your Beike patient representative **to complete the registration** process and schedule a treatment date.

It is essential to notify your Beike patient representative if there are changes in **Dumitru Tudorache**'s medical condition prior to the scheduled treatment. Changes in the medical condition may alter the initial treatment recommendations made by our medical department. Any alteration or variation in the medical condition, symptoms, primary diagnosis, medications, current treatments or rehabilitation prescribed by the local physician is important. Please send any information concerning these changes to your Beike patient representative so our doctors can analyze the new data.

We look forward to meeting **Dumitru Tudorache**. Our medical team is prepared to provide the best care available and has high hopes for a successful outcome. Please contact your Beike patient representative should you have any questions.

Sincerely,

Enrico Bisello
